

8th Grade Algebra

Module X: Group Assignment - Presentations Using Google Docs

For this week's group assignment you will be using Google Docs to create short presentations consisting of 4-6 slides (sorta like PowerPoint) describing the process of solving equations with variables in terms of other variables.

Things that should be included are:

- all group member names
- additive inverse
- multiplicative inverse
- reverse order of operations
- example(s) with instructions

You guys should already have a Google Account. If you do not, you can follow this [Google account link](#). Click on the bottom right right where it reads "Get Started".

Make sure that once the presentation is created it is shared with all other group members.

When the presentation is finished make sure it is published and paste the link into the assignment submission area.
