

Using Slideshare in an Educational Setting

A Collaboratively created
presentation by Joe Tompkins, Terrie
Ponder and Nancy Mortensen

What is it?

Slideshare is a website (www.slideshare.net) that allows users to upload, share, and collaborate on PowerPoint presentations.

Joe's Comments:

Using the electronic whiteboard, many teachers use PowerPoint to create lectures and lessons. Slideshare would give them a place to:

- Find new lessons
- Upload/store their own lessons
- Share their lessons with other teachers (whether next door or across the world)
- Allow students to access and review lessons

Terrie's Comments:

Slideshare would allow teachers to:

- Embed their presentations into blogs, webpages, or other presentations
- Share their presentations on Twitter, Facebook, Edmodo, or other social website

Nancy's Comments:

Slideshare would allow students to:

- Create a presentations and upload it. Other students are able to give constructive comments.
- Browse in slideshare to find information about nearly any topic. Students can use slideshare for research to help create a presentation.
