## Educational Website

I just found out about a website called [Gliffy](#) through my educational psychology class. This website offers both a free and premium membership for users to create diagrams, flow charts, floorplans, etc. I am using this website to create a schema for that particular class and have found it very easy to navigate. I am hoping to introduce the site to my students in the near future. The students could create all sorts of charts and diagrams using this software. In addition to learning additional technology skills, the software could be used in correlation with other classes. I intend to talk with the language arts teacher to see if there are some diagrams the students could create in my class based

upon the language arts curriculum. I am also going to have the students create a layout of our computer lab using the Gliffy site. I have attached a snapshot of a diagram I have created using this website. I am going to brainstorm about more ways I can use the site in my classroom. I think there are numerous possibilities!
