Reflection on Stop Motion Video

This project covered the following standards:

- NETS 1A: Promote, support, and model creative and innovative thinking inventiveness
- COE Conceptual Framework 4. Adaptive: Candidates should be able to demonstrate flexibility and strategic planning appropriate to a wide variety of learners for effective transformational systemic change

For this assignment in my videotape production and utilization class, I had to take numerous still pictures and important them into Movie Maker. Then I had to time them a specific way so that it appeared to be an action video. While, my subject in the video is quite trivial it was one of the most fun projects and was well received by classmates, friends, and family. I plan on talking to the academic teachers on my hall to get ideas on what topics might be good to do a stop motion project on in my computer class.
