Reflection on 7462 Professional Development Modules & MEDT 7467 Course Website/WebQuest

This project covered the following standards:

- NETS 2B: Develop technology-enriched learning environments that enable all students to pursue their individual curiosities and become active participants in setting their own educational goals, managing their own learning, and assessing their own progress.

- COE Conceptual Framework 8: Knowledgeable: Candidates should be able to demonstrate general knowledge inherent in a liberal arts curriculum, advanced knowledge in content areas, and specific knowledge in professional education for the implementation of transformational systemic change.

In MEDT 7462 my group created three different professional development models: one about wikis, one about SMART Boards, and another one about using GALILEO. For each module we had to provide a wiki along with resources that teachers would be able to work through on their own. The MEDT 7467 course website and webquest allowed me to create a flexible environment for the students to work in. There was some differentiation and students had choices in parts of the assignment. The unit plan allowed for student assessment of their learning and goals. It also required them to share their findings and discoveries at the end of the unit.
