

Reflection on MEDT 6462 Research Project & MEDT 7464 Group PBL Project

This project covered the following standards:

- NETS 3B: Collaborate with students, peers, parents, and community members using digital tools and resources to support student success and innovation.
- COE Conceptual Framework 5: Collaborative: Candidates should be able to develop skills to work effectively with various stakeholders involved in the educational process that will bring about transformational systemic change.

For the MEDT 6462 research project, my group created a wiki to explore the topic of using blogs, nings, and wikis in K-12 classrooms. We each did research on the topic and created a wiki that hosted a summary of our findings including articles, videos, and discussion.

For the 7464 group project, I had to work with my classmates to create a proposal for Project Based Learning in a school setting. We each were given different roles and communicated mostly through Google Docs. Our end product with a website that showcased the proposal, biographies, budget information, time tables, research, surveys, and a resource kit. This was a challenging project. I was a little unsure if my group was heading in the right direction, but it was a great experience to collaborate through Google Docs and really make the assignment a true team effort.
