Reflection on MEDT 6462 Team Blog and MEDT 7485 Emerging Issues Project

This project covered the following standards:

- NETS 4C: Promote and model digital etiquette and responsible social interactions related to the use of technology and information.

- COE Conceptual Framework 9: Proactive: We believe that candidates should be able to advocate for the removal of barriers that impede life long learning and hinder transformational systemic change.

The MEDT 6462 Team Blog was one of my first blogging experiences. I had two partners and we were each responsible for submitting articles relating to the administration of instructional technology. We also commented and discussed these articles with each other. This was a very positive and beneficial experience for me. For my MEDT 7485 Emerging Issues project, I created a wiki that was geared toward convincing stakeholders that instructional technology coordinators are needed within our school system. I conducted surveys using Google Docs and a presentation using Prezi.
