

Reflection on MEDT 7464 Group PBL Project & MEDT 6462 Team Blog

This project covered the following standards:

- NETS 4D: Develop and model cultural understanding and global awareness by engaging with colleagues and students of other cultures using digital-age communication and collaboration tools.
- COE Conceptual Framework 3: Life Long Learners: Candidates should seek continually to improve their knowledge, disposition, and skills to influence transformational systemic change.
- COE Conceptual Framework 5: Collaborative: Candidates should be able to develop skills to work effectively with various stakeholders involved in the educational process that will bring about transformational systemic change.

For the 7464 group project, I had to work with my classmates to create a proposal for Project Based Learning in a school setting. We each were given different roles and communicated mostly through Google Docs. Our end product with a website that showcased the proposal, biographies, budget information, time tables, research, surveys, and a resource kit. This was a challenging project. I was a little unsure if my group was heading in the right direction, but it was a great experience to collaborate through Google Docs and really make the assignment a true team effort. The MEDT 6462 Team Blog was one of my first blogging experiences. I had two partners and we were each responsible for submitting articles relating to the administration of instructional technology. We also commented and discussed these articles with each other. This was a very positive and beneficial experience for me.
